

# Carbon Offsetting

For businesses that want to reduce  
their climate impact

Helping you reduce your climate impact

# What is Carbon Offsetting?

Flogas are now offering Carbon Offsetting in the UK. Carbon Offsetting allows companies to counteract their greenhouse gas emissions by purchasing carbon credits which, in turn invest in a project giving an equivalent reduction of emissions elsewhere in the world; either reducing or absorbing carbon dioxide.

**For a minimal fee, we will support you in reducing your business' climate impact by offsetting the carbon emissions from the gas provided to you.**

# The benefits to your business

Carbon offsetting allows environmentally-conscious companies to bring about economic, social and health benefits to different communities whilst committing to reducing your business' impact on the climate and environment.

**Businesses that are actively leading the way and planning for climate change secure an 18% higher ROI due to gaining recognition from investors\*.**

**Demonstrate your corporate social responsibility and environmental integrity to customers with marketing materials to use on your website.**

**Differentiate your business from the competition by taking a proactive approach to tackling climate change and reducing global carbon emissions.**

**Support a variety of projects that provide sustainable development in communities around the world.**

**Use certificates issued for carbon offsets to report your climate actions to major sustainability reporting initiatives.**

\*CDP Report on S&P 500 companies, 2014

# How it works

**1** You reduce your emissions as much as possible

**2** We'll calculate how many unavoidable carbon emissions are left to offset from your annual gas consumption\*

**3** We will purchase carbon credits on your behalf for a minimal fee

**4** These are used to invest in sustainable projects elsewhere in the world

**5** The projects reduce or capture equivalent CO<sub>2</sub> emissions that otherwise would have been released into the atmosphere

Your investment into projects will generate carbon credits. These are used to counteract your unavoidable CO<sub>2</sub> emissions from using gas.

**1 tonne of LPG burnt**

=

**3 tonnes of CO<sub>2</sub>e released\*\***

=

**3 carbon credits**

\* Carbon credits are calculated based on gas delivered since being enrolled on the Carbon Offsetting scheme

\*\* Carbon credits will be calculated using the exact calculation; 1 tonne of LPG = 2.937 tonnes CO<sub>2</sub>e.

# How we choose our projects

We have chosen verified carbon mitigation projects and every one of the projects we support complies with either the Verified Carbon Standard (VCS) or Gold Standard (GS), which are approved under the ICROA Code of Best Practice.

**Gold Standard**  
Climate Security & Sustainable Development

## Our Projects:

### **Nafa Naana efficient LPG cookstoves**

Distributing clean and efficient cooking equipment to vulnerable communities in Burkina Faso, Africa.

### **Kariba REDD+ forest protection**

Saving forests, protecting wildlife and changing lives in Zimbabwe, Africa.

### **Supporting renewable energy projects**

Investing in windpower in India and Hydropower in China, whilst providing job opportunities for local communities.

For more information about how you can offset your gas carbon emissions,
